In short, an approved maintenance program is a list (in the form of a long table) of all maintenance tasks which need to be performed on an aircraft from time to time. In other words, based on the AMP an airworthiness engineer knows exactly what tasks need to be performed after an aircraft reaches a certain point in life, be it calculated based on calendar age, flight hours or flight cycles.

A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information.

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports (STAR) and International aerospace abstracts (IAA).

Providing a detailed look at helicopter maneuvers, the information in this guide helps to solidify concepts gained from flight training in a student pilot's mind by incorporating the Practical Test Standards into every maneuver description. The graphical and textual explanations work in conjunction with an instructor's lessons, allowing students to prepare before sessions and to review afterwards as well. Because helicopter pilots must rely on their memory or understanding of a particular maneuver, the Helicopter Maneuvers Manual provides readers with a crystal-clear picture of what level of performance is expected of them every step and includes insights into the common errors associated with each move.

This book constitutes selected papers from the Second International Workshop on IoT Streams for Data-Driven Predictive Maintenance, IoT Streams 2020, and First International Workshop on IoT, Edge, and Mobile for Embedded Machine Learning, ITEM 2020, co-located with ECML/PKDD 2020 and held in September 2020. Due to the COVID-19 pandemic the workshops were held online. The 21 full papers and 3 short papers presented in this volume were thoroughly reviewed and selected from 35 submissions and are organized according to the workshops and their topics: IoT Streams 2020: Stream Learning; Feature Learning; ITEM 2020: Unsupervised Machine Learning; Hardware; Methods; Quantization.
