"Design of Headed Anchor Bolts," Engineering Journal, American Institute of Steel Construction, Vol. 20, pp. 58-69. In current practice the design of base plates is controlled by bearing restrictions on the concrete; shear is transmitted to the concrete largely through anchor bolts, shear lugs or bars attached to the base plate and the tensile anchorage steel is generally proportioned only for direct stress.

Design of Headed Anchor Bolts - AISC

Anchor rods may be configured to provide anchorage into concrete by means of a head, threading with a nut on the end, a hook, or by swaging. The term anchor bolt, when used with ASTM A307 grade C, A325, or A490 material, however, only describes the first option for the following reasons: These specifications include heading requirements.
