## Biology Fruit Fly Lab Answers

The fruit fly lab is a staple of many high school and college biology courses. How to Raise Fruit Flies. 1. Order your fruit flies from a biological supply company (Carolina, Wards, Etc..) 2. Place the flies in vials containing culture medium (food) 3. Remove the flies you choose for mating and place in a new vial. 4. Remove adults (after mating) and wait for the adults to emerge. Fruit flies have a life cycle like all insects. 5.

AP biology lab Help Please! (fruit flies)? | Yahoo Answers  
Fruit flies do, in fact share 75% of the genes that cause disease with humans, so scientists really do want to study fruit flies for the understanding of how all organisms have that same basic biology that is common, even with fruit flies. Because fruit flies have a 10 day life-span after the larvae stage, it is easy to examine the genetic patterns of the parents and the other generations of offspring.

## Fruitfly Lab - BIOLOGY JUNCTION

Since the fruit fly was selected for study nearly a hundred years ago, a great deal has been learned about its genome. In fact, the first chro-mosome map of any kind was constructed to detail the fruit fly. Chromosomes 1 (the X chromosome), 2, and 3 are very large, while chromosome 4 (the Y chromosome) is extremely small. Thousands of

more than two choices. Adult fruit flies are attracted to substances that offer food or an environment in which to lay eggs and develop larvae. Typically those environments are rotting or fermenting fruit. Adult fruit flies are attracted to bright light, and their larvae move away from bright light. Adult fruit flies also demonstrate a negative geotaxis; they climb up in their chambers or vials against gravity.
