A CCTV system serves mainly as a security force multiplier, providing surveillance for a larger area, more of the time, than would be feasible with security personnel alone. CCTV systems are often used to support comprehensive security systems by incorporating video coverage and security alarms for barriers, intrusion detection, and access control.

CCTV Technology Handbook - Homeland Security

The Public Space and Surveillance (CCTV) licence is required when manned guarding activities are carried out using closed circuit television equipment for activities like monitoring members of the public in a public or private place, or to identify a particular person. This includes the use of CCTV in these cases to record images that are viewed on non-CCTV equipment.

CCTV Course - Training for CCTV Operators - Monitoring ...

The No. 1 decision that will make or break your CCTV inspection program is the operator who runs the equipment. The wrong person will sink your program faster than anything else, while the right one will ensure everything runs smoothly. There are three areas to consider when hiring a CCTV operator – innate skills, learned skills and attitude.

The Online Training Course has the following testing modules. Pre-Test: 24 questions Quizzes: 30 short quizzes all through the online courses Post-Test: 25 random questions from a question databank Certificate and Continuing Education (CE) A certificate of completion will be issued to students who get more than 65% in the Post-test.

Post 9/11 the need for an expansion of surveillance and greater expenditure on surveillance capabilities has been argued for by government and industry to help combat terrorism. This has been coupled with increasing incorporation of surveillance technologies into the routine practice of criminal justice. This important collection draws together key contemporary writings to explore how the surveillance gaze has been directed in the name of crime control. Key issues include theories on surveillance, CCTV, undercover police surveillance, bodies databases and technologies, and surveillance futures. It will be an essential collection for law librarians and criminologists.

Video surveillance systems, often referred to as closed-circuit television (CCTV), have become a defining feature of modern life. Their widespread use by many different agencies for a range of purposes is no longer surprising, and is generally accepted in most European countries. Although broad academic interest accompanied the proliferation of CCTV in the mid to late 1990s, issues of governance and public policy are rarely explicitly addressed by social scientists and many of the concerns raised during the debate which followed the video surveillance revolution remain unanswered, and are as pertinent today as they were then. This book brings into focus the ways in which the implementation of cameras and systems, and their operation and technical features, are the product of decisions and policies made in a variety of contexts and by a variety of authorities and interested parties. It examines the cultural context in which cameras are deployed and explores how this context can shape their diffusion and use. The book places particular emphasis on studies of video surveillance in different national, institutional, cultural and linguistic settings. The book is divided into two parts. The chapters in part one are theoretically informed contributions from a variety of academic disciplines. Part two consists of five case studies, which are less theoretical and more descriptive, but which offer important insights for the governance of video surveillance cameras. Providing a fascinating study of the wider implications of video surveillance and its pervasive use, this book will be of interest to all those interested in how this phenomenon affects all of us in society today.

Surveillance happens to all of us, everyday, as we walk beneath street cameras, swipe cards, surf the net. Agencies are using increasingly sophisticated computer systems - especially searchable databases - to keep tabs on us at home, work and play. Once the word surveillance was reserved for police activities and intelligence gathering, now it is an unavoidable feature of everyday life. Surveillance as Social Sorting proposes that surveillance is not simply a contemporary threat to individual freedom, but that, more insidiously, it is a powerful means of creating and reinforcing long-term social differences. As practiced today, it is actually a form of social sorting - a means of verifying identities but also of assessing risks and assigning worth. Questions of how categories are constructed therefore become significant ethical and political questions. Bringing together contributions from North America and Europe, Surveillance as Social Sorting offers an innovative approach to the interaction between societies and their technologies. It looks at a number of examples in depth and will be an appropriate source of reference for a wide variety of courses.

Where To Download Cctv Operator Course Question And Answer

The two-volume set LNCS 8258 and 8259 constitutes the refereed proceedings of the 18th Iberoamerican Congress on Pattern Recognition, CIARP 2013, held in Havana, Cuba, in November 2013. The 137 papers presented, together with two keynotes, were carefully reviewed and selected from 262 submissions. The papers are organized in topical sections on mathematical theory of PR, supervised and unsupervised classification, feature or instance selection for classification, image analysis and retrieval, signals analysis and processing, applications of pattern recognition, biometrics, video analysis, and data mining.

During the last decade in particular the levels of critical engagement with the challenges posed for privacy by the new technologies have been on the rise. Many scholars have continued to explore the big themes in a manner which typifies the complex interplay between privacy, identity, security and surveillance. This level of engagement is both welcome and timely, particularly in a climate of growing public mistrust of State surveillance activities and business predisposition to monetize information relating to the online activities of users. This volume is informed by the range of discussions currently conducted at scholarly and policy levels. The essays illustrate the value of viewing privacy concerns not only in terms of the means by which information is communicated but also in terms of the political processes that are inevitably engaged and the institutional, regulatory and cultural contexts within which meanings regarding identity and security are constituted.

This important book offers unique insights into crime and its prevention in retailing. It is the first comparative study of crime and nuisance in town centres and shopping centres. The book contributes directly to the current debate about the vitality and viability of high-street shopping. It discusses critically the use and effectiveness of a range of security options, including the role of security guards and the 'privatization' of policing in the retail sector. A detailed examination is made of the burgeoning use of closed circuit television, something which is contrasted with the lack of information about its effectiveness. This timely and major contribution is of interest to retailers, town-centre and shopping-centre managers, the private security industry and police officers, as well as academics and students.

In security science, efficient operation depends typically on the interaction between technology, human and machine detection and human and machine decision making. A perfect example of this interplay is ' gatekeeping ', which is aimed to prevent the passage of people and objects that represent known threats from one end to the other end of an access point. Gatekeeping is most often achieved via visual inspections, mass screening, random sample probing and/or more targeted controls on attempted passages at points of entry. Points of entry may be physical (e.g. national borders) or virtual (e.g. connection log-ons). Who and what are defined as security threats and the resources available to gatekeepers determine the type of checks and technologies that are put in place to ensure appropriate access control. More often than not, the net performance of technology-aided screening and authentication systems ultimately depends on the characteristics of human operators. Assessing cognitive, affective, behavioural, perceptual and brain processes that may affect gatekeepers while undertaking this task is fundamental. On the other hand, assessing the same processes in those individuals who try to breach access to secure systems (e.g. hackers), and try to cheat controls (e.g. smugglers) is equally fundamental and challenging. From a security standpoint it is vital to be able to anticipate,

Where To Download Cctv Operator Course Question And Answer

focus on and correctly interpret the signals connected with such attempts to breach access and/or elude controls, in order to be proactive and to enact appropriate responses. Knowing cognitive, behavioral, social and neural constraints that may affect the security enterprise will undoubtedly result in a more effective deployment of existing human and technological resources. Studying how inter-observer variability, human factors and biology may affect the security agenda, and the usability of existing security technologies, is of great economic and policy interest. In addition, brain sciences may suggest the possibility of novel methods of surveillance and intelligence gathering. This is just one example of a typical security issue that may be fruitfully tackled from a neuroscientific and interdisciplinary perspective. The objective of our Research Topic was to document across relevant disciplines some of the most recent developments, ideas, methods and empirical findings that have the potential to expand our knowledge of the human factors involved in the security process. To this end we welcomed empirical contributions using different methodologies such as those applied in human cognitive neuroscience, biometrics and ethology. We also accepted original theoretical contributions, in the form of review articles, perspectives or opinion papers on this topic. The submissions brought together researchers from different backgrounds to discuss topics which have scientific, applicative and social relevance.

Many liberals consider CCTV surveillance in public places - particularly when it is as extensive as it is in England - to be an infringement of important privacy-based rights. An influential report by the House of Lords in 2009 also took this view. However there has been little public, or academic, discussion of the underlying principles and ethical issues. What rights of privacy or anonymity do people have when abroad in public space? What is the rationale for these rights? In what respect does CCTV surveillance compromise them? To what extent does the state's interest in crime prevention warrant encroachment upon such privacy and anonymity rights? This book offers the first extended, systematic treatment of these issues. In it, the author develops a theory concerning the rationale for the entitlement to privacy and anonymity in public space, based on notions of liberty and dignity. She examines how CCTV surveillance may compromise these rights, drawing on everyday conventions of civil inattention among people in the public domain. She also considers whether and to what extent crime-control concerns could justify overriding these entitlements. The author's conclusion is that CCTV surveillance should be appropriate only in certain restrictively-defined situations. The book ends with a proposal for a scheme of CCTV surveillance that reflects this conclusion.
