Globalization is "the flow of people, goods, services, capital, and technology across international borders" is significantly impacting the chemistry and chemical engineering professions. Chemical companies are seeking new ideas, a trained workforce, and new market opportunities regardless of geographic location. During an October 2003 workshop, leaders in chemistry and chemical engineering from industry, academia, government, and private funding organizations explored the implications of an increasingly global research environment for the chemistry and chemical engineering workforce. The workshop presentations described deficiencies in the current educational system and the need to create and sustain a globally aware workforce in the near future. The goal of the workshop was to inform the Chemical Sciences Roundtable, which provides a science-oriented, apolitical forum for leaders in the chemical sciences to discuss chemically related issues affecting government, industry, and universities.
