This new edition of RICK REMENDER and WES CRAIG's DEADLY CLASS, VOL. 1 features a media tie-in photo cover with key imagery from the highly anticipated SYFY series-coming in 2019 from Executive Producers the RUSSO BROTHERS(Directors of Avengers: Infinity War)!! "DEADLY CLASS is a solid read for those who want a combination of MARK MILLAR'sSWANTEDand Harry Potterwith GARTH ENNIS's (Preacher) style." -Library Journal(Starred Review) Welcome to the most brutal high school on earth, where the world's top crime families send the next generation of assassins to be trained. Murder is an art. Killing is a craft. At Kings Dominion School for the Deadly Arts, the dagger in your back isn't always metaphorical. Collects DEADLY CLASS #1-6

It's 1987, and homeless teenager Marcus Lopez Arguello has no reason to keep living. Until one fateful evening, when he is approached by a mysterious girl who invites him to join Kings Dominion Atelier of the Deadly Arts -- a brutal, clandestine high school, where the world's top crime families send the next generation of assassins to be trained. Murder is an art, killing is a craft, and the dagger in your back is no metaphor.

From the front jacket flap: Contrary to widespread expectations in the wake of Sputnik, outer space did not immediately become a new arena for a superpower arms competition. Although the United States and the Soviet Union began to use space extensively for military purposes, both exhibited relatively little interest in the development of space weaponry. By the beginning of the 1980s, however, an arms race in space seemed inevitable. Now both the United States and the Soviet Union have developed the means to disable satellites and are now also considering the deployment of ballistic missile defenses in space. Why were these weapons never extensively developed earlier? What changed in the late 1970s to reverse the predominant trend in the militarization of space? What are the lessons for arms control and for Soviet-American relations in general? Paul Stares addresses these fundamental questions by examining the factors that have shaped United States policy towards the military use of space and in particular the development of antisatellite weapons. States relies heavily on declassified documents found in Presidential libraries and made available under the Freedom of Information Act, and he obtained additional information from a comprehensive series of interview with former members of the U.S. government and armed services. By judicious use of this material, he provides the first detailed account of United States space weapons policy and programs. An invaluable source of information for defense analysts and scholars of international relations, The Militarization of Space is essential reading for anyone wishing to understand present United States military space policy and its implications for the future.

Drawing on data from nineteenth- and early twentieth-century obstetric logs to better represent the experience of cesarean surgery for women of all classes and races, as well as interviews with obstetricians who have performed cesareans and women who have given birth by cesarean, Cesarean Section is the definitive history of the use of this surgical procedure and its effects on women's and children's health in the United States.

An incisive analysis of the Pentagon, the military, and their vast, frequently hidden influence on American life argues that the Pentagon has, since its inception, operated beyond the control of any force in government or society, drawing on extensive personal experience, exhaustive research, and numerous interviews to prove the author's contention. Reprint.

Living in a Dangerous Climate provides a journey through human and Earth history, showing how a changing climate has affected human evolution and society. Is it possible for humanity to evolve quickly, or is slow, gradual, genetic evolution the only way we change? Why did all other Homo species go extinct while Homo sapiens became dominant? How did agriculture, domestication and the use of fossil fuels affect humanity's growing dominance? Do today's dominant societies - devoted as they are to Darwinism and 'survival of the fittest' - contribute to our current failure to meet the hazards of a dangerous climate? Unique and thought provoking, the book links scientific knowledge and perspectives of evolution, climate change and economics in a way that is accessible and exciting for the general reader. The book is also valuable for courses on climate change, human evolution and environmental science.

Capitalism has never been a subject for economists alone. Philosophers, politicians, poets and social scientists have debated the cultural, moral, and political effects of capitalism for centuries, and their claims have been many and diverse. The Mind and the Market is a remarkable history of how the idea of capitalism has developed in Western thought. Ranging across an ideological spectrum that includes Hobbes, Voltaire, Adam Smith, Edmund Burke, Hegel, Marx, and Matthew Arnold, as well as twentieth-century communist, fascist, and neoliberal intellectuals, historian Jerry Muller examines a fascinating thread of ideas about the ramifications of capitalism and its future implications. This is an engaging and accessible history of ideas that reverberate throughout everyday life.
