A longtime standard for military healthcare personnel, the second edition of Military Advanced Regional Anesthesia and Analgesia Handbook (MARAA) has been thoroughly revised and updated. Although the MARAA handbook initially gained its reputation as a useful resource for managing pain associated with battlefield trauma, its beautifully illustrated step-by-step guidance provides pertinent and practical guidance for managing vital acute pain services in all civilian and military clinical settings. Opening chapters review equipment, local anesthesia and additives, and physics of ultrasound and nerve stimulation. Much of the book is devoted to step-by-step guidance on performing various regional anesthesia nerve blocks organized by pertinent neuroanatomy, use of nerve stimulation, and use of ultrasound. The concluding group of chapters discusses organization of the acute pain service and staff, a review of multidisciplinary care, basics of pediatric regional anesthesia, first-aid acupuncture, and more.

This volume presents the contributions of the 6th International Conference on Advancements of Medicine and Health Care through Technology – MediTech 2018, held between 17 – 20 October 2018 in Cluj-Napoca, Romania. The papers of this Proceedings volume present new developments in : - Health Care Technology - Medical Devices, Measurement and Instrumentation - Medical Imaging, Image and Signal Processing - Modeling and Simulation - Molecular Bioengineering - Biomechanics

Chronic liver failure is a frequent condition in clinical practice that encompasses all manifestations of patients with end-stage liver diseases. Chronic liver failure is a multiorgan syndrome that affects the liver, kidneys, brain, heart, lungs, adrenal glands, and vascular, coagulation, and immune systems. Chronic Liver Failure: Mechanisms and Management covers for the first time all aspects of chronic liver failure in a single book, from pathogenesis to current management. Each chapter is written by a worldwide known expert in their area and all provide the latest state-of-the-art knowledge. This volume is specifically designed to provide answers to clinical questions to all doctors dealing with patients with liver diseases, not only clinical gastroenterologists and hepatologists, but also to internists, nephrologists, intensive care physicians, and transplant surgeons.

The book considers the place of investigative work in the science curriculum and presents the latest research in this field. The authors consider the theoretical framework which underlies this kind of practical work - what are pupils actually learning and what are we trying to teach them? They argue that the thinking behind the doing of science is at present undervalued and that this is something that needs to be taught. They present innovative ways of focusing teaching on particular aspects of investigations and consider the issue of assessment. The interplay between theory, research and practice will appeal to readers who are involved in secondary science education and who are eager to know more about the present state of knowledge in investigative work in science.

"Over the last two decades, many of India's leading companies have been achieving double-digit growth - even in the midst of a global recession. Understanding what is driving the Indian business juggernaut is an imperative no manager - in any part of the world - can afford to ignore." "In this timely book, professors Peter Cappelli, Harbir Singh, Jitendra Singh, and Michael Useem of the Wharton School India Team reveal the secrets of India's top-performing companies: an innovative, unconventional, and exportable set of management principles they call the "India Way." The authors argue that the India Way could have the same remarkable impact that Japanese business leaders and the "Toyota Way" had on manufacturing around the world: it could change the practice - and purpose - of management on a global scale." "Drawing on interviews with more than one hundred top executives from India's largest corporations - including Infosys Technologies, Reliance Industries, and Tata Sons - the authors reveal how the India Way differs from Western management practice in how organizations manage and value employees; transcend barriers through improvisation; create compelling value propositions that serve a massive, underprivileged market; govern for the long term; and make social issues a business priority. The authors identify how managers in other countries can learn from these practices and adapt them in their own companies."--BOOK JACKET.

Presenting recent advances in clinical diagnosis and treatment derived from an increased understanding of the biology of the hip, this unique text examines hip disease and pathophysiology through the lenses of kinematics, biomechanics, anatomy and metabolism. Opening chapters examine the impact of health care organization on hip care and prevalence and burden of osteoarthritis.Biomechanical considerations of the hip and gait pathomechanics in hip disease are then discussed, followed by chapters covering femoroacetabular impingement, possible links between OA and metabolic syndrome, osteonecrosis, osteoporosis and Paget’s disease. Considerations of risk reduction surrounding hip arthroplasty conclude the text, including device and surgical options for THA, hip sepsis and prevention of perioperative infection, and management of venous thromboembolism. Taken together, this represents a new and important context for the discussions and management of hip disease for orthopedic surgeons and researchers alike.

Aimed at the trainee surgeon and experienced transplant surgeon, this compendium on split-liver grafting contains articles written by faculty members of the first International Course on Split-Liver Transplantation. It covers the main aspects of the field and is geared towards helping surgeons select the best surgical techniques as well as identifying the pitfalls. The text features detailed instructions on the various procedures as well as an overview of the area.

Starting from the critical notion that we should be asking questions of contemporary importance - and that 'importance' itself must be defined - Anthony Pym sets about undoing many of the currently dominant models of translation history, positing, among much else, that the object of this history should be translators as people, that researchers are subjectively involved in their object, that cultural systems are based on social will, that translators work in intercultural spaces, and that a model of cooperation through negotiation may be applied to the way translators (and researchers!) work between cultures. At the same time, the proposed methodology is eminently constructive, showing how many empirical techniques can be developed and applied: clear illustrations are given of corpus selection, working definitions, deceptive statistics, and the construction of networks and regimes, incorporating elaborate examples drawn from medieval and modernist fields, as well as finding space for notes on practical problems like funding research. Finding its focus in historical debates, this book cannot help but create contemporary debate: its arguments seek not only to revitalize the historical study of translation but also to develop the wider concerns of intercultural studies.
