4G LTE EPC (Evolved Packet Core) is a framework for providing converged voice and data on a 4G Long-Term Evolution (LTE) network. 2G and 3G network architectures process and switch voice and data through two separate sub-domains: circuit-switched (CS) for voice and packet-switched (PS) for data. EPC is a whole new core network with a flat, all-IP based

*Evolved Packet Core (EPC) in 4G LTE
Networks by TELCOMA...*

Evolved Packet Core (EPC) is a framework for providing converged voice and data on a 4G Long-Term Evolution (LTE) network. 2G and 3G network architectures process and switch voice and data through two separate sub-domains: circuit-switched (CS) for voice and packet-switched (PS) for data. Evolved Packet Core unifies voice and data on an Internet Protocol (IP) service architecture and voice is treated as just another IP application.

YateUCN (Unified Core Network) is our solution that provides maximum functionality for all the other Evolved Packet Core nodes in a single server: Our solution comprises the MME, SGW, PGW, and PCEF nodes. It is very flexible and can communicate with HSS via 2G/3G protocols or 4G protocols. This is the most complex product we developed.

LTE EPC is the Core Network of LTE networks.

A detailed description of the nuts and bolts of EPC that are required to really get services up and running on a variety of operator networks. An in-depth overview
