This book covers the three units of the GCSE in Applied ICT which can be taken as a two-year course from September 2002 or a one-year course from September 2003. It will be an invaluable text for students studying this course for assessment by any of the examination boards. The Assessment grid for Edexcel has been included in the book Unit 1 is a very practical unit and the student is shown how to use various applications including a web browser, word processing, database, spreadsheet and multimedia presentation software. Unit 2 covers the ways in which ICT is used in different types of organisation. It includes numerous discussion points and ideas for students to research. It takes the student through the various stages of designing and implementing an ICT system. Unit 3 explores how individuals, families, clubs, people at work and community groups use ICT. Up-to-date case studies are used as the basis for discussion and exercises, with suggestions and guidance for work.

Introduces the BASIC programming language, shows how to incorporate graphics and music in programs, and discusses the machine language used by the Commodore 64 computer

Learn Adobe LiveMotion 2.0 with the proven Classroom in a Book format. Self-paced lessons in a project-oriented format teach new users how to get up and running quickly with LiveMotion 2.0. Review questions reinforce key concepts and techniques.

The "intelligence" of traditional artificial intelligence systems is notoriously narrow and inflexible--incapable of adapting to the constantly changing circumstances of the real world. Although traditional artificial intelligence systems can be successful in narrowly prescribed domains, they are inappropriate for dynamic, complex domains, such as autonomous robot navigation. **This book proposes an alternative methodology for designing intelligent systems based on a model of intelligence as adaptive behavior. The author describes an experiment in computational neuroethology--the computer modeling of neuronal control of behavior--in which the nervous system for an artificial insect is modeled. The experiment demonstrates that simple, complete intelligent agents are able to cope with complex, dynamic environments--suggesting that adaptive models of intelligence, based on biological bases of adaptive behavior, may prove to be very useful in the design of intelligent, autonomous systems. Provides a lucid critique of traditional artificial intelligence research programs Presents new methodology for the construction autonomous agents, which has implications for mobile robotics Of interest to researchers in a variety of fields: artificial intelligence, neural networks, robotics, cognitive science, and neuroscience

The Wiebo Ludwig affair brought to the forefront the often explosive relationship between the oil and gas industry and the ranchers and farmers who live under the shadow of its rigs. But behind the headlines, an unreported sea-change is taking place in the long history of these very different players. Canada's petroleum industry is in the middle of a massive paradigm shift. The old focus of drill fast, pump profits, leave quick is long gone. New executives and directors are bringing a mentality of corporate and social responsibility to the industry that pays attention to a triple bottom line: environmental, social, and economic. A Patch of Green examines the forces that have come to bear to bring about this change. From the viewpoints of environmentalists, landowners, drill workers and corporate executives, veteran journalist Sydney Sharpe reveals an industry wrestling with the excesses of its past and learning to profit from a new economic future.
