Solutions solutions are values that we get when solving equations that aren't really solutions to the equation. In this video, we explain how and why we get extraneous solutions, by understanding the logic behind the process of solving equations.

Solutions solutions (video) |
Equations | Khan Academy

In general, extraneous solutions arise when we perform non-invertible operations on both sides of an equation. (That is, they sometimes arise, but not always.) Squaring (or raising to any other even power) is a

Another square root is negative 1.5.

Download Free How To Solve For Extraneous

Solutions

So it's 1.5. And then, according to this, this should be equal to 2 times 2.25 is 4.5 minus 6. Now, is this true? This is telling us that 1.5 is equal to negative 1.5. This is not true. 2.5 did not work for this radical equation. We call this an extraneous solution. So 2.25 is an extraneous solution.

Hi Liz, I am going to solve a similar problem. Solve and check for extraneous solutions $(t^2 + 3)^{1/2} = 2$. First square both sides to get. $t^2 + 3 = 2^2 = 4$ $t^2 = 1$ so $t = 1$ or $t = -1$. Now check to see if either solution is extraneous.
