Filling the gap for an
expert text dealing
exclusively with the

practical aspects of HPLC-MS coupling, this concise, compact, and clear book provides detailed information to enable users to employ the method most efficiently. Following an overview of the current state of HPLC-MS and its instrumentation, the text goes on to discuss all relevant aspects of method development. A chapter on tips and tricks is followed by user reports on the advantages - and pitfalls - of applying the method in real-life scenarios. The whole is rounded off by a look at future developments by renowned manufacturers.

How can I use my HPLC/UHPLC
equipment in an optimal way,
where are the limitations of
the technique? These
questions are discussed in
detail in the sequel of the
successful "HPLC Expert" in
twelve chapters written by
experts in the respective
fields. The topics encompass
- complementary to the first
volume - typical HPLC users'
problems and questions such
as gradient optimization and
hyphenated techniques (LC-
MS). An important key aspect
of the book is UHPLC: For
which analytical problem is
it essential, what should be
considered? Besides
presentation of latest
developments directly from

the main manufacturers, also UHPLC users and independent service engineers impart their knowledge. Consistent with the target groups, the level is advanced, but the emphasis is on practical applications.

This publication is based on peer-reviewed manuscripts from the 2019 Conference on Drug Design & Discovery Technologies (CDDT) held at Ramaiah University of Applied Sciences, India. Providing a wide range of up to date topics on the latest advancements in drug design and discovery technologies, this book ensures the reader receives a good

understanding of the scope
of the field. Aimed at
scientists, students,
regulators, academics and
consultants throughout the
world, this book is an ideal
resource for anyone
interested in the state of
the art in drug design and
discovery.

Quality Control and
Evaluation of Herbal Drugs
brings together current
thinking and practices for
evaluation of natural
products and traditional
medicines. The use of herbal
medicine in therapeutics is
on the rise in both
developed and developing
countries and this book

facilitates the necessary
development of quality
standards for these
medicines.This book
elucidates on various
challenges and opportunities
for quality evaluation of
herbal drugs with several
integrated approaches
including metabolomics,
chemoprofiling, marker
analysis, stability testing,
good practices for
manufacturing, clinical
aspects, Ethnopharmacology
and Ethnomedicine inspired
drug development. Written by
Prof. Pulok K Mukherjee, a
leader in this field; the
book highlights on various
methods, techniques and
approaches for evaluating

the purity, quality, safety
and efficacy of herbal
drugs. Particular attention
is paid to methods that
assess these drugs'
activity, the compounds
responsible and their
underlying mechanisms of
action. The book describes
the quality control
parameters followed in India
and other countries,
including Japan, China,
Bangladesh, and other Asian
countries, as well as the
regulatory profiles of the
European Union and North
America. This book will be
useful in bio-prospecting of
natural products and
traditional medicine-
inspired drug discovery and

development. Provides new
information on the research
and development of natural
remedies - essential reading
on the study and use of
natural resources for
preventative or healing
purposes Brings together
current thinking and
practices in quality control
and standardization of
herbal drugs highlighting
several integrated
approaches for metabolomics,
chemo-profiling and marker
analysis Aids in developing
knowledge of various
techniques including
macroscopy, microscopy,
HPTLC, HPLC, LC-MS/MS, GC-MS
etc. with the development of
integrated methods for

Volumes in this widely
revered series present

comprehensive reviews of drug substances and additional materials, with critical review chapters that summarize information related to the characterization of drug substances and excipients. This organizational structure meets the needs of the pharmaceutical community and allows for the development of a timely vehicle for publishing review materials on this topic. The scope of the Profiles series encompasses review articles and database compilations that fall within one of the following six broad categories: Physical profiles of drug

substances and excipients;
Analytical profiles of drug
substances and excipients;
Drug metabolism and
pharmacokinetic profiles of
drug substances and
excipients; Methodology
related to the
characterization of drug
substances and excipients;
Methods of chemical
synthesis; and Reviews of
the uses and applications
for individual drug
substances, classes of drug
substances, or excipients.

Proteomics refers to the

entire complement of
proteins, including
modification. This promising
discipline has enabled us to
study proteins from a
massive and comprehensive
point of view. The book
Recent Advances in
Proteomics Research
describes in five sections
some of the applications of
proteomics. This fine
research has been written by
leading experts worldwide.
This book is aimed mainly at
those interested in proteins
and in the field of
proteins, particularly
biochemists, biologists,
pharmacists, advanced
graduate students and
postgraduate researchers.

The book covers advances in hydrothermal reduction of CO2 into low-carbon fuels. It offers perspectives from chemical engineering, environmental chemicals, organic chemistry, inorganic chemistry, physical chemistry, geology and materials science. It addresses fundamentals and applications of hydrothermal chemical processes, associated materials, and technologies. It describes reduction with biomass and dissociation of water by solar energy-driven two-step process. Challenges and strategies are discussed to facilitate research and

development.

This book is a collection of 13 innovative papers describing the state of the art and the future perspectives in solid-phase extraction covering several analytical fields prior to the use of gas or liquid chromatographic analysis. New sorptive materials are presented including carbon nanohorn suprastructures on paper support, melamine sponge functionalized with urea-formaldehyde co-oligomers, chiral metal-organic frameworks, UiO-66-based metal-organic frameworks, and fabric phase sorptive media for various

applications. Solid-phase extraction can be applied in several formats aside from the conventional cartridges or mini-column approach, e.g., online solid-phase extraction, dispersive solid-phase microextraction, and in-syringe micro-solid-phase extraction can be very helpful for analyte pre-concentration and sample clean-up. Polycyclic musks in aqueous samples, 8-Nitroguanine in DNA by chemical derivatization antibacterial diterpenes from the roots of salvia prattii, perfluoroalkyl substances (PFASs) in aater samples by bamboo charcoal-based SPE, parabens in

environmental water samples,
benzotriazoles as
environmental pollutants,
organochlorine pesticide
residues in various fruit
juices and water samples and
synthetic peptide
purification are among the
applications cited in this
collection. All these
outstanding contributions
highlight the necessity of
this analytical step,
present the advantages and
disadvantages of each method
and focus on the green
analytical chemistry
guidelines that have to be
fulfilled in current
analytical practices.

Proteomics was thought to be

a natural extension after
the field of genomics has
deposited significant amount
of data. However, simply
taking a straight verbatim
approach to catalog all
proteins in all tissues of
different organisms is not
viable. Researchers may need
to focus on the perspectives
of proteomics that are
essential to the functional
outcome of the cells. In
Integrative Proteomics,
expert researchers
contribute both historical
perspectives, new
developments in sample
preparation, gel-based and
non-gel-based protein
separation and
identification using mass

spectrometry. Substantial chapters are describing studies of the sub-proteomes such as phosphoproteome or glycoproteomes which are directly related to functional outcomes of the cells. Structural proteomics related to pharmaceutics development is also a perspective of the essence. Bioinformatics tools that can mine proteomics data and lead to pathway analyses become an integral part of proteomics. Integrative proteomics covers both look-backs and look-outs of proteomics. It is an ideal reference for students, new researchers, and experienced scientists who want to get

an overview or insights into
new development of the
proteomics field.
