Living near an active volcano can be beneficial as well as dangerous. The soil is fertile, and a lot of volcanic products can be used in everyday life. Sulphur, for example, can be used as an ingredient in matches, or in medicine, while the finer volcanic deposits, such as the gravels and sands found in rivers, can be used in building materials. Living on the Volcano is another astonishingly strong book from the author of Family and The Nowhere Men. Mike Calvin has once again reached heights with his sports writing which seems to be unfair on his peers. His ability to gain access to the people who really count is phenomenal and ensures once again that Living on the Volcano is a triumph. The chapters which focus on the lower league managers are for me the strongest as we hear from men who don't often make the headlines.

A mysterious incursion into the life of the man that lived all his life on a volcano.

John Dvorak, the acclaimed author of Earthquake Storms, looks into the early scientific study of volcanoes and the life of the man who pioneered the field, Thomas Jaggar. Educated at Harvard, Jaggar went to the Caribbean after Mount Pelee exploded in 1902, killing more than 26,000 people. Witnessing the destruction and learning about the horrible deaths these people had suffered, Jaggar vowed to dedicate himself to a study of volcanoes. In 1912, he built a small science station at the edge of a lake of molten lava at Kilauea volcano in the Hawaiian Islands. Jaggar found something else at Kilauea: true love. For more than twenty years, Jaggar and Isabel Maydwell ran the science station, living in a small house at the edge of a high cliff that overlooked the lava lake, Maydwell quickly becoming one of the world's most astute observers of volcanic activity. Mixed with tales of myths and rituals, as well as the author's own experiences and insight into volcanic activity, The Last Volcano reveals the lure and romance of confronting nature in its most magnificent form—the edge of a volcanic eruption.
