A practical hands-on user guide and eBook with time saving tips and comprehensive instructions for using Lotus Notes effectively and efficiently.

IBM's® Practical, Hands-On Guide to Supporting and Administering Lotus Notes and Lotus Domino This is the only book that focuses entirely on the specific technical, desk-side, and infrastructure issues that support professionals and administrators encounter when implementing and running Lotus Notes in production environments. Authored by one of IBM's top Lotus experts, it draws on the firsthand experiences of IBM professionals working in hundreds of client environments. Mark Elliott has created a true "encyclopedia" of proven resolutions to common problems and has streamlined processes for infrastructure support. Elliott systematically addresses support solutions for all recent Lotus Notes and Domino environments. Survival Guide for Lotus Notes and Domino Administrators is organized for rapid access to specific solutions in three key areas: client setup, technical support, and client software management. It brings together best practices for planning deployments, managing upgrades, addressing issues with mail and calendars, configuring settings based on corporate policies, and optimizing the entire support delivery process. Along the way, Elliott illuminates the administrative and support implications of the latest enhancements to Lotus Notes and Lotus Domino, in areas ranging from messaging to plug-in support. Whatever your role in managing, administering, or supporting IBM Lotus technologies, this book will help you respond more quickly, efficiently, and effectively—reducing support costs as you increase customer satisfaction. Coverage includes An overview to key software changes introduced in Release 8.0 Resolutions to dozens of error messages and other obscure issues Using the "Smart Upgrade" toolkit to automate upgrades Implementing policies to manage client settings and reduce administrative overhead Optimizing Lotus Notes performance and avoid user frustration Making the most of technical support tools and plug-ins Finding technical support and patches on the IBM developerWorks website Configuring Lotus Notes and supporting common activities

The Eureka Software Factory project (ESF) was set up by a Group of European partners in 1987. Its objective was broadly to improve the large-scale software production process by introducing an industrialised approach to have The Software Factory Challenge social, organisational and technical aspects. The project was set up under the pan-European Eureka programme, and it was funded by the partners together with their national governments. This book is not a history of the ESF project, but rather a presentation of its main ideas and achievements, and an account of how the concepts pioneered by the project have become part of a general movement in both the industrial and academic domains. In this movement, the facility for the production, use and maintenance of large-scale computer artefacts (the Software Factory) is treated in a wide and 'organic' way, so as to include concepts such as business value and process improvement; with the development of new technologies being driven by these new, wide requirements. This new approach is in contrast with a narrowly technological one, in which individual tasks like programming are aided by machines but in which the production process as a whole is not supported. The main body of the book is divided into four Parts. Part I gives a short overview of the ESF project and its ideas, and goes on to attempt to place the ESF work in the context of industry as a whole (with reference to both producers and users of Information Technology systems). Part II sets out to explain the technological basis of the Software Factory as seen by ESF and goes on to describe some experimental and pioneering implementations of Factory Support Environments and their constituents. Part III is devoted to the most complete implementation of an ESF Factory Support Environment to date, Kernel/2r. This Section provides a highly detailed discussion of both design and implementation issues. In Part IV addresses what deployment strategies are now available to continue the spread of these ideas in order to meet the goal of better software-based systems (i.e. systems which are safer, more economical to build, more easily changed and more useful than those that have been built up to now). Finally, a Glossary of Terms and a list of References is given. Readers: those who have a professional interest in Information Technology.

Everyone feels the pain of too many passwords to remember. Everyone can relate to the security exposure of weak passwords, chosen for convenience. And, everyone can relate to passwords placed in proximity to the workstation for a quick reminder. Unfortunately, that note can allow more than the intended user into the system and network. The average user today often has four or more passwords. And, security policies that focus on password complexity and password-change frequency can cause even more difficulty for users. This IBM® Redbooks® publication introduces IBM Security Access Manager for Enterprise Single Sign-On 8.2, which provides single sign-on to many applications, without a lengthy and complex implementation effort. Whether you are deploying strong authentication, implementing an enterprise-wide identity management initiative, or simply focusing on the sign-on challenges of a specific group of users, this solution can deliver the efficiencies and security that come with a well-crafted and comprehensive single sign-on solution. This book is a valuable resource for security officers, administrators, and architects who want to understand and implement an identity management solution in a medium-scale environment. This book is an update to the existing SG24-7350-01. IMPORTANT: Please note that in the latest version of SAM ESSO, the following two capabilities described in this SAM ESSO Redbooks publication have been removed: -Virtual appliance support -Mobile (iPad) support

Ensure effective and efficient team collaboration by building a solid social infrastructure with IBM Lotus Quickr 8.5 with this book and eBook.
