Diagnosing Symptoms of a Bad Manual Transmission ...

Check your transmission fluid. Transmission fluid lubricates the moving parts of your transmission. You should check your fluid every 30,000 to 60,000 miles in a manual transmission car. Failure to do so can cause your transmission fluid to become contaminated with bits of metal from the bearings, synchronizers and gears.

How to Troubleshoot a Manual Transmission That Will Not ...

Manual transmissions use transmission or hydraulic fluid to operate. Unlike in automatic cars where the fluid provides power to the automatic transmission, this one lubricates the system and facilitates the functioning of the master cylinder. If the system is low on transmission fluid, the clutch won't be able to disengage the engine.

Why Won't Your Manual Transmission Car Shift Gears ...

There are lots of gears in a manual transmission system. There is 1st gear, 2nd gear, 3rd gear, 4th gear, 5th gear, reverse gear, and sometimes a 6th gear. There is also a hub gear which goes between 1st gear and 2nd gear, and then 3rd gear and 4th. If any one of these gears becomes damaged or worn out, then you will have trouble shifting them.

5 Causes of a Hard to Shift Manual Transmission ...

If you see the manual transmission is not engaging into gear, with the motor running, there might be a clutch problem. This could happen quite often with old cars. You can be sure if you see the transmission engaging when the engine is not running. It's another in a series of manual transmission problems.
