Today almost all new marine engines use the closed cooling system design. These systems are pressurized, just like your car or truck. By increasing the pressure inside the closed part of the system, the boiling point of the coolant is enhanced. For every pound of pressure added, approximately 3° F can be added to your engine's operating ...

WATER COOLING SYSTEM - University of Rijeka

Most newer marine engines use an enclosed cooling system. This means that there is a small tank on the top of the engine that uses a combination of fresh water and coolant. This fresh water is circulated through the engine and through a heat exchanger. The fresh water, in this system, absorbs the heat of the engine.

Engine Cooling Systems Explained - Boat Safe

Normal marine fresh water cooling systems allow the engine to operate at temperatures moderately above 160 degrees F. However, as the heat exchanger accumulates time the system may begin to operate in the range of 170 degrees F. NOTE: In most marine cooling systems a normally functioning system should never allow the engine to operate at ...
