Biology EOC Review Answers - Currituck County Schools

The carrying capacity of the Earth usually refers to its ability to support human life, because it is the human population that is currently undergoing explosive exponential growth. But the carrying capacity can be applied to any life form and to any part of the biosphere, such as the number of deer that can be supported by an oak forest.

CARRYING Capacity. Carrying capacity is typically expressed as the number of animals of a certain type which can be supported in an ecosystem. Carrying capacity may be seen as an equilibrium or balance. However, the carrying capacity for many species is always changing due to various factors. The carrying capacity of an ecosystem depends on three factors: 1) the amount of resources available in the ecosystem 2) the size of the population 3) the amount of resources each individual is ...
