Night And Low Light Photography

Low light photography is not necessarily just night photography, as many people assume. There could be different amounts of light coming from various sources and whatever is less

Bookmark File PDF Night And

than daytime light outside, I consider low-light. Indoors photography without much ambient light (as in many of our homes) as well as the light that is barely visible to our eyes at night, is also considered to be low-light.

Bookmark File PDF Night And Tips Low Light

This guide begins with an explanation of the technical aspects that need to be considered, such as the best equipment to use for night and low-light photography, which films to choose, how to ensure correct exposure in tricky situations, and understanding natural and artificial light.

1. Choose the perfect aperture and shutter speed for low light.

When shooting in low light, you should use the widest aperture you can (i.e., the lowest f-number) to let in the most light possible. If you're using expensive telephoto lenses, then you'll probably have a maximum aperture of
