The Routledge Course in Japanese Translation brings together for the first time material dedicated to the theory and practice of translation to and from Japanese. This one semester advanced course in Japanese translation is designed to raise awareness of the many considerations that must be taken into account when translating a text. As students progress through the course they will acquire various tools to deal with the common problems typically involved in the practice of translation. Particular attention is paid to the structural differences between Japanese and English and to cross-cultural dissimilarities in stylistics. Essential theory and information on the translation process are provided as well as abundant practical tasks. The Routledge Course in Japanese Translation is essential reading for all serious students of Japanese at both undergraduate and postgraduate level.

The SBIR program allocates 2.5 percent of 11 federal agencies' extramural R&D budgets to fund R&D projects by small businesses, providing approximately \$2 billion annually in competitive awards. At the request of Congress the National Academies conducted a comprehensive study of how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs. Drawing substantially on new data collection, this book examines the SBIR program at the National Institutes of Health and makes recommendations for improvements. Separate reports will assess the SBIR program at DOD, NSF, DOE, and NASA, respectively, along with a comprehensive report on the entire program.
