The third part of the book takes a broader view, dealing with the nature of production-system architectures, and compares OPS5 with other tools for programming expert systems. The data memory, rule memory, control, and programming environment are described for 14 expert-system tools such as EMYCIN, EXPERT, KAS, ROSIE, KEE, and S.1.

OPS5. (language) A programming language for rule-based production systems. A rule consists of pre-condition (s) and a resulting action. The system checks its working memory to see if there are rules whose pre-conditions are satisfied, if so, the action in one selected satisfied rule is executed. There is a public domain implementation of an OPS5 interpreter written by Charles L. Forgy <forgy@cs.cmu.edu> in 1977.
