This book highlights the key issues, opportunities and challenges facing African firms, industries, cities and nations in their quest to compete successfully in the global economy. Exploring a topic which has grown in importance as Africa faces a period of subdued economic development, this edited collection takes a unique multi-disciplinary, multi-industry and multi-country approach. The authors provide insights into a broad range of issues, including competitiveness measurement and evaluation, sectoral competitiveness of declining and emerging industries, threats of the " Dutch Disease, " and talent competitiveness. This timely book offers a response to the urgent need for the diversification of economies and the advancement of manufacturing in Africa, appealing to scholars of international business and economics.

This is a unique text providing both design guidance and policy direction for the provision and design of public toilets covering city-wide, district-level and site-specific principles. It highlights the role of urban design in reversing the trend of inadequate toilet provision, and sets out guidelines for design which meets both user need and provider requirements. Greed presents the fundamental principle that toilets should not be dealt with in isolation from mainstream urban policy, but that they should be seen as a serious core component in both strategic urban policy and local area design. She argues toilets are valuable townscape features in their own right as manifestation civic pride and good urban design - essential architectural components which add to the quality and viability of an area. Although a range of design guidance on toilets exists there is still considerable dissatisfaction with the end product in terms of building design, levels of provision, location, safety, layout, DDA requirements and accessibility. By outlining user demands and provider constraints, Greed shows that it is essential for architects to have an informed understanding and practical knowledge of toilet issues when working with public and private sector providers. Examples of toilet architecture from other countries, and policies from different cultural settings, are included for comparative purposes to invigorate UK perspectives.

Inclusive Design: What's in It for Me? presents a comprehensive review of current practice in inclusive design. With emphasis on new ideas for improvement and arguments for wider implementation in future, a unique combination of leading opinions on inclusive design from both industry and academia are offered. The theme throughout encourages a positive view of inclusive design as a good and profitable process and to produce a change to more effective approaches to "design for all". Inclusive Design is composed of two parts with a common chapter structure so that the business and design arguments in favour of inclusive design can be easily compared and assimilated. The Business Case presents the industrial and management benefits of inclusive design. It concentrates on demographic, legal and ethical reasons for all businesses being better off taking inclusivity into account in the design of their products or services. Case histories demonstrating the commercial success of inclusive design are drawn from the experiences of companies such as Tesco, Fiat and The Royal Mail. The Designers' Case focuses on the factors a designer needs to take into account when dealing with inclusivity. "Who is going to use my design?" "What do they need from my design?" "How do I take any medical needs into account?" "Just how "inclusive" is my design?" are all questions answered in this section which presents the necessary tools for effective inclusive design. This part of the book aims to convince a designer that inclusive design is a realistic goal. Inclusive Design will appeal to designers, researchers and students and to managers making decisions about the research and design strategies of their companies.
