Since corrections or updates may have been made after this Handbook was published in August 2011, download the online AE program sheet from ughb.stanford.edu to ensure you are using an accurate major plan. Note: You must use a program sheet from a year you are enrolled at Stanford. Additional information. Class requirements for the A/E Major

Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

A comprehensive introduction to the tools, techniques and applications of convex optimization.

Now in its second edition, this book focuses on practical algorithms for mining data from even the largest datasets.

This volume, covering entries from "Determinables and determinates" to "Fuzzy logic," presents articles on Eastern and Western philosophies, medical and scientific ethics, the Holocaust, terrorism, censorship, biographical entries, and much more.

STEM Road Map: A Framework for Integrated STEM Education is the first resource to offer an integrated STEM curricula encompassing the entire K-12 spectrum, with complete grade-level learning based on a spiraled approach to building conceptual understanding. A team of over thirty STEM education professionals from across the U.S. collaborated on the important work of mapping out the Common Core standards in mathematics and English/language arts, the Next Generation Science Standards performance expectations, and the Framework for 21st Century Learning into a coordinated, integrated, STEM education curriculum map. The book is structured in three main parts—Conceptualizing STEM, STEM Curriculum Maps, and Building Capacity for STEM—designed to build common understandings of integrated STEM, provide rich curriculum maps for implementing integrated STEM at the classroom level, and supports to enable systemic transformation to an integrated STEM approach. The STEM Road Map places the power into educators' hands to implement integrated STEM learning within their classrooms without the need for extensive resources, making it a reality for all students.

This textbook takes a unified view of the fundamentals of wireless communication and explains cutting-edge concepts in a simple and intuitive way. An abundant supply of exercises make it ideal for graduate courses in electrical and computer engineering and it will also be of great interest to practising engineers.

In this Second Edition of this radical social history of America from Columbus to the present, Howard Zinn includes substantial coverage of the Carter, Reagan and Bush years and an Afterword on the Clinton presidency. Its commitment and vigorous style mean it will be compelling reading for under-graduate and post-graduate students and scholars in American social history and American studies, as well as the general reader.

The Routledge Handbook of Civil Society in Asia is an interdisciplinary resource, covering one of the most dynamically expanding sectors in contemporary Asia. Originally a product of Western thinking, civil society represents a particular set of relationships between the state and either society or the individual. Each culture, however, molds its own version of civil society, reflecting its most important values and traditions. This handbook provides a comprehensive survey of the directions and nuances of civil society, featuring contributions by leading specialists on Asian society from the fields of political science, sociology, anthropology, and other disciplines. Comprising thirty-five essays on critical topics and issues, it is divided into two main sections: Part I covers country specific reviews, including Japan, China, South Korea, India, and Singapore. Part II offers a series of thematic chapters, such as democratization, social enterprise, civic activism, and the media. As an analysis of Asian social, cultural, and political phenomena from the perspective of civil society in the post-World War II era, this book will be useful to students and scholars of Asian Studies, Asian Politics, and Comparative Politics.

Presenting the current debate about cities in the Middle East from Sana'a, Beirut and Jerusalem to Cairo, Marrakesh and Gaza, the book explores urban planning and policy, migration, gender and identity as well as politics and economics of urban settings in the region. This handbook moves beyond essentialist and reductive analyses of identity, urban politics, planning, and development in cities in the Middle East, and instead offers critical engagement with both historical and contemporary urban processes in the region. Approaching "Cities" as multi-dimensional sites, products of political processes, knowledge production and exchange, and local and global visions as well as spatial artefacts. Importantly, in the different case studies and theoretical approaches, there is no attempt to idealise urban politics, planning, and everyday life in the Middle East — which (as with many other cities elsewhere) are also situations of contestation and violence — but rather to highlight how cities in the region, and especially those which are understudied, revolve around issues of housing, infrastructure, participation and identity, amongst other concerns. Analysing a variety of cities in the Middle East, the book is a significant contribution to Middle East Studies. It is an essential resource for students and academics interested in Geography, Regional and Urban Studies of the Middle East.
