"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk>.

In 1996 the Institute of Medicine launched the Quality Chasm Series, a series of reports focused on assessing and improving the nation's quality of health care. Preventing Medication Errors is the newest volume in the series. Responding to the key messages in earlier volumes of the series—"To Err Is Human (2000), Crossing the Quality Chasm (2001), and Patient Safety (2004)"—this book sets forth an agenda for improving the safety of medication use. It begins by providing an overview of the system for drug development, regulation, distribution, and use. Preventing Medication Errors also examines the peer-reviewed literature on the incidence and the cost of medication errors and the effectiveness of error prevention strategies. Presenting data that will foster the reduction of medication errors, the book provides action agendas detailing the measures needed to improve the safety of medication use in both the short- and long-term. Patients, primary health care providers, health care organizations, purchasers of group health care, legislators, and those affiliated with providing medications and medication-related products and services will benefit from this guide to reducing medication errors.

Home parenteral nutrition (HPN) is the intravenous administration of nutrients carried out in the patient's home. This book analyses current practices in HPN, with a view to inform best practice, covering epidemiology of HPN in regions including the UK and Europe, USA and Australia, its role in the treatment of clinical conditions including gastrointestinal disorders and cancer, ethical and legal aspects and patient quality of life.

Our market-based, profit-driven health care system in the United States has put necessary care increasingly beyond the reach of ordinary Americans. Primary health care, the fundamental foundation of all high-performing health care systems in the world, is a critical but ignored casualty of the current system. Unfortunately, primary care is often poorly understood, even within the health professions. This book describes what has become a crisis in primary care, defines its central role, analyzes the reasons for its decline, and assesses its impacts on patients and families. A constructive approach is presented to rebuild and transform U.S. primary care with the urgent goal to address the nation's problems of access, cost, quality and equity of health care for all Americans.

Lose weight, lower cholesterol, significantly reduce the risk of disease, and become physically fit—in just 4 weeks. Professional athlete-turned-firefighter Rip Esselstyn is used to responding to emergencies. So, when he learned that some of his fellow Engine 2 firefighters in Austin, TX, were in dire physical condition—several had dangerously high cholesterol levels (the highest was 344!)—he sprang into action and created a life-saving plan for the firehouse. By following Rip's program, everyone lost weight (some more than 20 lbs.), lowered their cholesterol (Mr. 344's dropped to 196), and improved their overall health. Now, Rip outlines his proven plan in this book. With Rip as your expert coach and motivator, you'll transform your body and lifestyle in a month. His plant-powered eating plan is based on a diet of whole foods, including whole grains, fresh fruits, vegetables, legumes, nuts, and seeds. Highly recommended!" -Dean Ornish, M.D., Founder and President, Preventive Medicine Research Institute, Clinical Professor of Medicine, U of California, SF, author, Dr. Dean Ornish's Program for Reversing Heart Disease
